

The Energy Co-op offers the following rates for **Off-Peak (OP)**:

Off-Peak (OP)	EcoChoice100 100% renewable electricity	EcoChoice20 20% renewable electricity	PECO price to compare April - June
generation, transmission and AEPS rate	8.15¢ per kWh	7.69¢ per kWh	6.58¢ per kWh

What are off-peak rates? What time are the off-peak rates effective?

Off-peak rates are only available for those customers with an existing off-peak meter. PECO reduced their off-peak rates by 50% on 1/1/2012 and plans to eliminate their off-peak rate entirely by 12/31/2012. PECO is not installing new off-peak meters. Off-peak service is not based upon usage at specific times of the day, but rather it is based on PECO's ability to turn off power to the meter for several hours during the middle of the day (typically off-peak meters are connected to household water heaters).
