## Solar power, from the rooftops of our members

Since 2002, The Energy Cooperative has been supporting the growth of solar power through our Solar Buyback Program. This program provides our most local source of clean energy, produced in southeastern Pennsylvania by our own members' solar systems and sold right back to their fellow Energy Cooperative members in the very same region.

Solar power has experienced an incredible growth spurt in Pennsylvania over the last few years. There are currently over 4,000 solar systems operating in the state, a number that is growing daily. In 2010, an estimated 2,000 to 3,000 Pennsylvanian's were estimated to be employed in the solar industry.

*Membership in The Energy Cooperative's Solar Buyback Program is currently closed.*
